SEMIANNUAL SURVEY OF SOVIET-TYPE SAM INSTALLATIONS

NPIC has undertaken a program to put under machine control a chronological summary of photographic coverages of SAM sites and other SAM-associated facilities. The summary for China, which is being published first, includes all photographic coverages of SAM facilities; for other countries, the summary will include all photographic coverages since the first [] mission in []. A Survey will be issued semiannually in order to provide an up-to-date file. SA-1 SAM sites will not be incorporated in the program because such changes as have occurred at these sites since the introduction of [] photography have been the subject of NPIC reports, and future changes will be published as they are observed. Installations included in the Survey will reflect only those which have been put under machine control at the time of publication.

In the Semiannual Survey, installations are arranged alphabetically within the country; however, NPIC can provide additional listings in any of the following sequences: WAC/PIC number; geographic coordinates; or, for USSR sites, Air Defense Area Designator.

For information defining the terminology used in the Survey series, and for maps of Air Defense Areas, see the November 1964 report, Introduction to the SAM Installation Series, NPIC/R-926/64 (TOP SECRET [])

[] Although portions of this series may be based on photography which is CONFIDENTIAL, []

[] the master file for the machine program cites references that require the present overall classification.

The machine survey provides the following information, from left to right.

A. FIRST LINE

The first line is a header line which identifies the installation to be described in the chronological listing of missions that follows on the second and third lines.

1. WAC. World Aeronautical Chart area in which the installation is situated.

2. NPIC Number. This is an installation number assigned by NPIC.

3. Installation Names. Installation names are limited to 10 spaces.

4. Designator. SAM sites which have designators are listed in the first 3 spaces, and the fourth digit indicates the type of site, e.g., SA-2 SAM Site C02-2 is C022.

SAM Support Facilities and SAM Assembly Facilities are identified by the following codes in the site designator spaces:

SF10	Type I
SF1A	Type IA
SF20	Type II
SF2A	Type IIA
SF0X	Irregular
SF0Y	Undetermined
SF0Z	SAM Assembly

For installations where multiple sites exist, the site designator is given as Complex (CPLX). For training installations with multiple sites, the site designator is given as Training (TRNG). When the site designator, type of SAM, or type of support facility cannot be determined, the appropriate position will be left blank.

5. Geographic Coordinates. The coordinates are derived by NPIC from the Series 200 US Air Target Chart, if

25X1
25X1

available, or other map or chart if the installation is in an area for which no Air Target Chart is available.

6. Air Defense Area. The Bombing Encyclopedia country code appears in the first 2 places of this column. The Z in the third position designates a SAM installation. The fourth position designates the Air Defense Area in which the installation is located. The last 4 digits indicate subdivisions within the district, e.g., ZE-5-1 becomes ZE0501. For countries other than the USSR, only the country code and Z appear.

7. Status. As listed on the first line, status is spelled out and is based on the most recent mission covering the facility.

B. SECOND LINE

The second line begins the report of the coverage of the earliest mission reported for the site. Subsequent missions for the same installation carry this as their first line and follow the same format. Within one installation, entries are arranged in chronological sequence.

1. Date. Month, day, and year of the mission are cited.
2. Mission. [Redacted] missions are cited by number alone. Other missions carry letter prefixes, e.g., [Redacted]

3. Quality. Abbreviations used in this space refer to conditions affecting photo interpretability and include weather limitations, camera angle, or an evaluation of the interpretability of the photography. The following abbreviations are used:

SC - Scattered cloud cover	SD - Semidarkness
HC - Heavy cloud cover	S - Snow
CS - Cloud shadow	CF - Camouflage
H - Haze	V - Vertical
O - Obliquity	SS - Small scale
P - Poor interpretability	C - Clear

F - Fair interpretability GC - Ground cover
G - Good interpretability

4. Status. Status, on line 2, is based entirely on the evidence of the cited photography. Thus, a site may have been listed on several missions as Complete, but if on one mission the status cannot be determined, on that mission status is Undetermined. Symbols are as follows:

U - Under construction	B - Abandoned
C - Complete	D - Dismantled
Y - Undetermined	N - Nonexistent

C. THIRD LINE

1. Negation Date. The date of the most recent photography on which there is no evidence of the target. If the negation date cannot be determined, the space is left blank.

2. Accession Number. A machine accession number is assigned by NPIC to each entry.

D. EQUIPMENT TYPE

An abbreviated summary of information reported at the installation on the cited photography is listed in the last column to the right. If an item is not present or is undetermined, nothing is printed out. Included in this column are SAM site configuration, launch positions, electronic facilities, site support facilities, missile-hold positions, missiles, missile components, vehicles, and equipment. Launch positions, electronic facilities, and missile-hold positions are described as being occupied (OCC), unoccupied (UNOCC), revetted and occupied (REV & OCC), and revetted and unoccupied (REV & UNOCC). The presence of equipment in the position, including unidentified equipment, determines occupancy.

If there are support facilities at the site, these are listed as ON SITE SUPPORT. Some sites are near other

TOP SECRET

established facilities which offer support in addition to, or in lieu of, typical site support facilities, and these are reflected as OFF SITE SUPPORT.

The building counts reflect the total number of buildings located anywhere within the site.

Standard qualifiers, probable (PROB) and possible (POSS), are used immediately following the word modified. For example, "CENTRAL GUIDANCE OCC POSS" is a confirmed central guidance area that is possibly occupied.

Additions to the Summary

Beginning in [] with [] Mission [] some additional information is given that is not carried for earlier coverages. The area within 1 nautical mile (nm) of an installation has been searched for the presence of AAA sites as well as for electronic sites. The number of these sites is listed, although it may be incomplete, particularly on low-level aircraft missions where

less than a mile is covered by photography. Electronic equipment is specified when possible.

Significant Changes

The Count column will vary considerably from one mission to another, chiefly as a result of factors listed under Quality. Usually there is no significance in the variation. When a significant change at an installation is observed by the photographic interpreter, the line which constitutes the change is repeated, flagged by an asterisk in the Count column.

Example: At a site which previously had only 5 launch positions, a sixth is observed for the first time. This significant change is indicated as follows:

- 6 LAUNCH PSN REV & OCC
- * LAUNCH PSN REV & OCC

Reference should be made to previous mission summaries to ascertain what change has occurred.
